styleGREEN PLANT AND MOSS OBJECTS & GREEN WALLS | PRODUCT CARE INSTRUCTIONS

styleGREEN products combine the positive feeling of natural plants with an unprecedented quality of preservation. As design objects in your apartment, office, restaurant or for events, styleGREEN products offer you the following benefits:

- No need to water
- No natural light necessary
- Natural look and feel of real plants

INFORMATION ON ALL STYLEGREEN PRODUCTS (EXCEPT REINDEER MOSS)

- Avoid constant and intense sunlight and direct lighting (i.e. halogen lights at close proximity).
- Avoid extreme air humidity (>70%) and very dry air. **Never hang the products near fireplaces, heating units or other heat sources.**
- Due to the preservation process, the plants obtain antistatic properties and attract very little dust. If necessary, they can be carefully cleaned with a feather duster.
- The initial "woody" smell disappears after 4–6 weeks and is harmless.
- Even though the plants smell absolutely natural: **do not water or spray them!**

ALL PRODUCTS MADE FROM REINDEER MOSS

- Avoid constant and intense sunlight and direct lighting.
- High levels of air humidity is not a problem for reindeer moss because the coating of salt allows it to absorb more liquid and become softer. With low air humidity (<30%), the moss becomes dry and brittle to the touch but won't suffer any other damage. Direct water contact can permanently damage the moss.
- Should dust settle on the moss over time, you can remove it with careful vacuuming or by tapping it gently.

If the product care information is not observed, the product may lose its color earlier than it should.
