Screw Remover Set

Item-no.: 230-747

SOLVE PROBLEMS WITH SCREWS QUICKLY AND EASILY!

- For extracting stripped screws
- Quick and easy to use
- Four bits in different sizes
- Two sides: one for drilling and one for extracting
- May be used with any standard drill
- Essential for all DIY enthusiasts

SUITABLE FOR MANY COMMON SCREW HEADS: SLOTTED / CROSS HEAD / TORX / HEXAGON SOCKET

Remove damaged and worn screws professionally!

Drill Side A

Extractor Side B

**Two sides:
One for drilling and
One for extracting**

Four screw extractors (each 51.5 mm long):
One 2.0 mm (A) / 2.6 mm (B) in diameter
One 3.0 mm (A) / 3.5 mm (B) in diameter
One 3.4 mm (A) / 4.1 mm (B) in diameter
One 5.2 mm (A) / 6.2 mm (B) in diameter

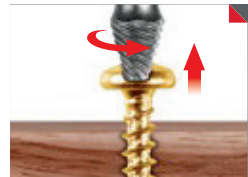

Use with cordless screwdriver or drill:

Drilling counter-clockwise, drill a hole into the screw using the bit (drill side).

Remove the bit, reverse it and reinsert it with the extractor side facing outwards.

Turn counter-clockwise with the extractor side and remove the screw*.

***Note:**

Apply the extractors consecutively (from small to large) until the right size grips.
