# Satho<sup>®</sup> Non Slip Strips, Set of 10

Item-no.: 570-051

**Satho<sup>®</sup>-Set ... the transparent slip prevention**

## **Satho® ... no more slipping. Guaranteed!**

**Satho®** is a self-adhesive wafer-thin strip that will quickly increase safety in showers – whether new or old, acrylic or steel.\*

The transparent strips are almost invisible and deliver a pleasantly non-slip and safe footing.

### **This set includes:**

**10 strips of film, each sized 30 x 2 cm, calculated for the standing area of a shower or bathtub and one cloth for removing grease from surfaces.**

**Use is easy.**

### **Application**

- Thoroughly clean the shower or bathtub, dry and then remove any grease with the supplied cleaning cloth, allow to dry for five minutes.
- Remove the kiss-cut Satho® strips individually from the release paper and apply in such a way that no air is trapped underneath at distances of between two and five centimetres apart. The ends of the strips should point towards the basin's or tub's plughole.

Attention: please do not touch the adhesive surface when applying the strips, smooth the strips with your fingers pressing them firmly down and taking particular care that the edges stick down. Please allow twelve hours before next contact with water.

Satho® is absolutely easy to maintain, it's hygienic and anti-bacterial.

However, if signs of use do appear over time, the strips are very easy to clean with a hand brush and a vinegar-based cleaner.

Satho® may be easily removed without leaving any residues should it become necessary to do so.

### **Removal**

- Carefully heat the Satho® strips with a hairdryer and pull the strips off slowly.

\* May not be used on surfaces with "Lotus", "Nano", "Pearl Effect" and similar coatings.
